Amendment in Response to Office Action mailed September 14, 2005

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

Claim 1 (Previously Presented): A programmer for an implantable medical device, the programmer comprising:

an internal antenna mounted on a first circuit board; and

a display device mounted on a second circuit board,

wherein the first circuit board includes a substantially contiguous ground plane layer interrupted by a plurality of gaps.

Claim 2 (Previously Presented): The programmer of claim 1, wherein the gaps divide the ground plane layer into a plurality of interconnected conductive ground plane regions.

Claim 3 (Original): The programmer of claim 1, wherein the gaps divide the adjacent ground plane regions to disrupt flow of eddy currents within the ground plane layer.

Claim 4 (Original): The programmer of claim 1, wherein each of the gaps extends outward from a central region of the ground plane layer.

Claim 5 (Original): The programmer of claim 1, wherein the first circuit board includes an electrostatic discharge layer defining a peripheral conductive layer and a central aperture.

Claim 6 (Original): The programmer of claim 5, wherein the internal antenna defines an aperture, and the central aperture of the electrostatic discharge layer substantially approximates a size and shape of the aperture of the antenna.

Application Number 10/693,011

Amendment in Response to Office Action mailed September 14, 2005

Claim 7 (Original): The programmer of claim 5, wherein the electrostatic discharge layer is a first electrostatic discharge layer formed on a first side of the ground plane layer, the programmer further comprising a second electrostatic discharge layer formed on second side of the ground plane layer.

Claim 8 (Original): The programmer of claim 7, wherein the second electrostatic discharge layer defines a second central aperture that substantially approximates a size and shape of the central aperture of the first electrostatic discharge layer.

Claim 9 (Original): The programmer of claim 1, wherein the antenna comprises a loop-like antenna shape that defines an aperture.

Claim 10 (Currently Amended): The programmer of claim 1, further comprising a battery bay formed within ~~the an~~ an aperture ~~of defined by~~ defined by the antenna.

Claim 11 (Withdrawn): A programmer for an implantable medical device, the programmer comprising:

an internal antenna mounted on a first circuit board; and

a display device mounted on a second circuit board,

wherein the antenna has a loop-like structure and defines a first aperture, and the first circuit board includes at least one signal plane with a electrostatic discharge layer defining a second aperture in substantially overlapping alignment with the first aperture.

Claim 12 (Withdrawn): The programmer of claim 11, further comprising a substantially contiguous ground plane layer interrupted by a plurality of gaps.

Claim 13 (Withdrawn): The programmer of claim 12, wherein the gaps divide the ground plane layer into a plurality of interconnected conductive ground plane regions.

Application Number 10/693,011

Amendment in Response to Office Action mailed September 14, 2005

Claim 14 (Withdrawn): The programmer of claim 12, wherein the gaps divide the adjacent ground plane regions to disrupt flow of eddy currents within the ground plane layer.

Claim 15 (Withdrawn): The programmer of claim 12, wherein each of the gaps extends outward from a central region of the ground plane layer.

Claim 16 (Withdrawn): The programmer of claim 11, wherein the electrostatic discharge layer substantially approximates a size and shape of the aperture of the antenna.

Claim 17 (Withdrawn): The programmer of claim 11, wherein the electrostatic discharge layer is a first electrostatic discharge layer formed on a first side of the ground plane layer, the programmer further comprising a second electrostatic discharge layer formed on second side of the ground plane layer.

Claim 18 (Withdrawn): The programmer of claim 17, wherein the second electrostatic discharge layer defines a second central aperture that substantially approximates a size and shape of the central aperture of the first electrostatic discharge layer.

Claim 19 (Withdrawn): The programmer of claim 11, further comprising a battery bay formed within the aperture of the antenna.

Claim 20 (Withdrawn): The programmer of claim 11, wherein the first circuit board includes telemetry circuitry for communication with a medical device via the antenna.

Claim 21 (Previously Presented): The programmer of claim 1, wherein each of the gaps has a width in a range of approximately 0.2 to approximately 3.0 mm.

Claim 22 (Withdrawn): The programmer of claim 12, wherein each of the gaps has a width in a range of approximately 0.2 to approximately 3.0 mm.
